Sadegh Rastgoo

Hey, my name is Sadegh Rastgoo. I am a curious Frontend Developer (and sometimes UI Designer) with over 3 years of experience based in Mashhad, Iran. I am always striving to grow and learn something new to build better products for better results. My specialization is Frontend Development with a focus on modern user interface and performance. I describe myself as a passionate developer who loves coding, learning, and growing.

Skills

Frontend Developer 👨‍💻   UI Design 📱   Graphic Design 🎨

Location

🇮🇷 Iran, Mashhad

Email

sadegh.rsg@gmail.com

Phone Number

+98 903 300 7793

Languages

Farsi   English

Education

Computer Software Engineering

Contact me

JavaScript

I have a deep knowledge of JavaScript, particularly ES6+ features. To gain a deeper understanding of JS, I focus on what's happening under the hood.

React.js

I have extensive experience with React, having used it for numerous projects. I am well-versed in common concepts of React and my principle is to write clean, maintainable code.

TypeScript

I have a strong command of TypeScript and consider it my primary programming language for developing web applications. I am always seeking to expand my knowledge in TypeScript.

Vue.js

I'mcurious to explore new technologies, and Vue is one of the technologies I have chosen to delve into. Through my experiences building apps using Vue, I gained a understanding of the Vue.

Next.js

I possess a wealth of experience and knowledge in creating high-quality web applications using Next.js. I have a deep understanding of the framework's capabilities.

Tailwind

I have experience working with CSS frameworks, but my preferred choice for styling web apps is Tailwind. I find Tailwind's utility-first approach to be highly efficient and flexible.

Testing

I have experience with testing tools such as Jest, Vitest, and React Testing Library, and have used them in several of my projects. Additionally, I am comfortable following the TDD approach in my work.

Storybook

I prioritize reusability and well-structured projects, which is why I utilize Storybook in my projects. By creating documented and isolated components, I ensure that the code can be easily reused and maintained in the future.

HTML/CSS/SASS

Effective design can encourage customers to choose your products over those of your competitors. I place importance on design.

CSS Frameworks

Tailwind, Bootstrap, Styled-Components, ChakraUI, MaterialUI, Mantine, Ant Design, Skeleton, CSS Modules, RadixUI

Tooling

I have experience working with a variety of tools that are essential for building web apps. ESLint, Prettier, Vite, Babel, Webpack, Git and ...

Figma

I am passionate about creativity and enjoy designing new and innovative user interfaces.

UI / Fullstack
ChehelKaman

ChehelKaman ecommerce is my latest project, where I worked as both a UI/UX designer and a developer. This project was for a client who needed a multilingual e-commerce website to sell their products online. To achieve Static-Site-Generation (SSG) for the frontend, I used Next.js, and for the backend, I utilized Supabase, a BaaS platform. I'm proud of how this project turned out and enjoyed the challenge of incorporating my design skills alongside my development expertise. Here is the website link: chehelkaman.ir

Frontend / a little UI
Trading Journal

Trading Journal was my most recent dashboard app. During this project, I worked for a client who was short on time but wanted the best project possible. Trading Journal app was built for professional traders and there are more than 7 pages in this app. Requests and responses will be sent through a REST API. This project was challenging because of all the little things to handle, such as data validation before sending any data to the backend. Here is the website link: journal.oraclez.io
